Addon installation and prerequisites

Installation

The first steps towards driving

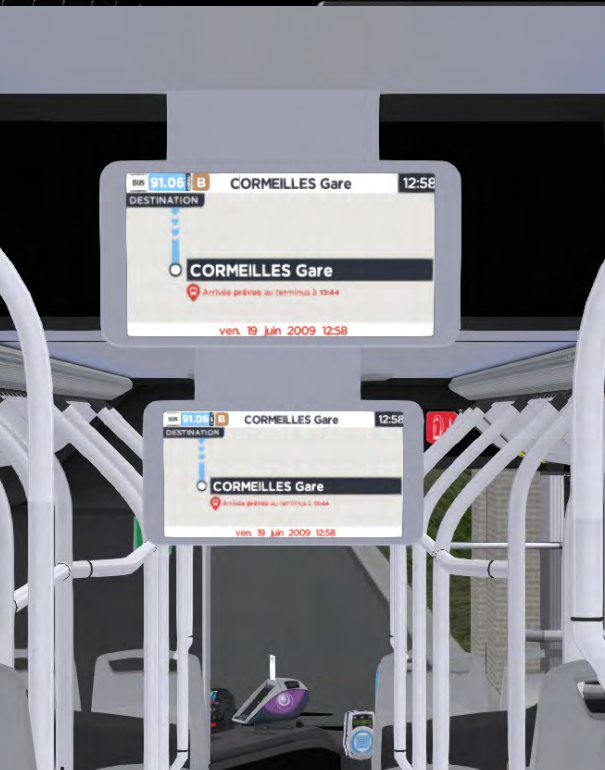

First, you need to find the OMSI 2 root folder - typically in the folder below.

C:\Program Files (x86)\Steam\steamapps\common\OMSI 2

Then, simply copy and replace all files from the archive to OMSI 2's root folder. Then once in game, select "Addon Grand Paris-Moulon" and spawn the mentioned vehicles.

All SAEIV codes and use of on-board equipment is identical to the basic Addon - see manual or website for details.

Les Cars Vier

Les Cars Vier is one of the operators on the Grand Paris-Moulon network. They typically operate the 91.6A & B lines, as well as the Navette Externe H.

For these services, Solaris Urbino 12LE and 15LE are equipped with AESYS destination control panels.

Keolis Essonne Mobilités

Keolis Essonne Mobilités is one of the operators of the Grand Paris-Moulon network. They generally operate on lines 11, 16 and 17.

For these services, the Solaris Urbino 10.5, 12 and 18m are equipped with Hannover EG3 destination control panels.

Transdev Les Cars Moulon

Transdev Les Cars Moulon is the main operator on the Grand Paris-Moulon network. They operate mainly on lines 7, 8, 14 and Express 91.06.

To carry out these services, Solaris Urbino 12m and 18m with various propulsion sources are equipped with Mobitec ICU 602 destination control panels.

On-board equipment

All vehicles are equipped with modern on-board systems such as an INEO Driver Computer and a Conduent ticketing system.
