

Villeumol 0.12 - Krueger Displays (Kajosoft)

This pack contains destination files (HOF) optimized for **Krueger** displays on the Villeumol 0.12 map. These files are specifically designed for the **Citybus O530** and **O530 Facelift** DLC vehicles.

Pack Content

The displays are divided into two files based on the bus screen resolution:

File Name	Name in OMSI Menu	Resolution (Format)
Villeumol_Krueger_0123.hof	Villeumol Krueger - Kajot 0123	112x16 — 84x16
Villeumol_Krueger_67.hof	Villeumol Krueger - Kajot 67	256x32 — 184x32

🔧 Installation & Selection Guide

1. Installation

- Open the **OMSI 2** folder in the archive and you will see the contents of this subfolder: **Addons** and **Vehicles**.
- Drag and drop these 2 folders into your OMSI 2 root directory (e.g., **C:\SteamLibrary\steamapps\common\OMSI 2**).

2. Usage

Kajosoft's Citaro buses feature 8 display variants (setvars). Choose your HOF file based on your bus configuration:

- **For Setvars 0, 1, 2, or 3:** Select **Villeumol Krueger - Kajot 0123** in the bus selection menu.
- **For Setvars 6 or 7:** Select **Villeumol Krueger - Kajot 67** in the bus selection menu.
- **For Setvars 4 or 5:** These formats are not directly compatible.
 - *Solution:* Choose any HOF file you prefer, then change the display type using the **in-bus tablet** to switch to a compatible model (0, 1, 2, 3, 6, or 7).

Support & Community
